

### **AMENDMENTS TO THE CLAIMS**

The following listing of claims replaces all prior versions of claims in the application.

1. (Previously presented): A mobile apparatus comprising:  
  
a broadcast receiving function for receiving a television broadcast; and  
  
a telephone communication function for performing a telephone communication,  
  
wherein  
  
an audio output device comprising a left-channel audio output unit and a right-channel audio output unit, and  
  
an audio processing circuit for outputting a left-channel signal of a television audio to the left-channel audio output unit and outputting a right-channel signal of the television audio to the right-channel audio output unit when a telephone communication is not performed and the television is viewed and listened to, the audio processing circuit further generating a monaural television audio signal from the left-channel signal and the right-channel signal of the television audio, outputting a monaural television audio using one of the left-channel and right-channel audio output units and outputting a telephone-received audio using the other audio output unit in the case of performing the telephone communication at the time of viewing / listening to the television, are provided.

2. (Previously presented): A mobile apparatus as claimed in Claim 1, wherein  
a setting means for setting which of the audio output units is used for outputting  
the television audio and the telephone-received audio in the case of performing the  
telephone communication at the time of viewing / listening to the television, is provided.

3. (Previously presented): A mobile apparatus as claimed in Claim 1, wherein  
a sound volume ratio control means for controlling a ratio of sound volumes of the  
two audio output units in the case of performing the telephone communication at the time  
of viewing / listening to the television, is provided.

4. (Original): A mobile apparatus as claimed in Claim 3, wherein  
a setting means used by a user for setting the sound volume ratio is provided.

5. (Previously presented): A mobile apparatus as claimed in Claim 3, wherein  
the sound volume ratio control means controls the sound volume ratio so that the  
sound volume of the telephone-received audio is higher than the sound volume of the  
television audio.

6. (Previously presented): A mobile apparatus as claimed in Claim 1, wherein

a display device for displaying a television image and a telephone-received image and a display control means for displaying both of the television image and the telephone-received image on the display device in the case of performing the telephone communication at the time of viewing / listening to the television, are provided.

7. (Original): A mobile apparatus as claimed in Claim 6, wherein  
the display control means window-displays one of the television image and the telephone-received image in a displayed image of the other.

8. (Original): A mobile apparatus as claimed in Claim 6, wherein  
the display control means divides a display screen into two regions and displays the television image in one of the divided display regions and the telephone-received image in the other region.

9. (Previously presented): A mobile apparatus as claimed in Claim 7, wherein  
a setting means used by the user for setting sizes and display positions of the television image and the telephone-received image displayed on the display device is provided.

Preliminary Amendment  
Application No. 10/549,303  
Attorney Docket No. 053121

10. (Previously presented): A mobile apparatus as claimed in Claim 1, wherein the audio output device is an earphone or a headphone.
